Mathematics is the language of the universe.  
Come learn and explore mathematics with a department that prides itself in research and individual mentorship. Class sizes are small, and each math major is paired with a faculty advisor.

A degree in mathematics prepares you for careers in many fields. These fields include data science, cryptography, math biology, education, and law. Statistician, mathematician and actuary were ranked among the best STEM careers in a 2021 survey (source: bestcollegereviews.org).

Undergraduate degree options include General Math, Applied Math, Secondary Education, Foundations of Mathematics, Actuarial Science & Insurance, and Statistics. The department offers frequent colloquia and seminars to engage students and faculty alike.
